COLD BREW SYSTEM - PRO SERIES

Brewing Guide

For video tutorials and more information, please visit www.ToddyCafe.com/brewing

BREWER SIZE	GROUND COFFEE	FILTERED WATER
PRO SERIES 10	10 LBS (4.5KG)	7 GAL (26.5L)
PRO SERIES 20	20 LBS (9KG)	14 GAL (53L)

IMPORTANT: Clean all reusable parts before first use.

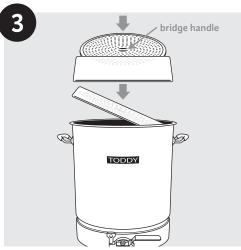

Metric equivalents are rounded for convenience.

Step 1 Begin by installing valve assembly so that the handle points away from the system when the valve is open. Tip: In order to turn the valve handle, you must first pull up on the handle lock.

Step 2 Close the valve completely. Remove filter platform and add a portion of the filtered water to fill the brewer to the middle of the support ring.

Step 3 Slide the platform into a new filter and fold the excess material underneath the filter platform at the open end. Holding the **bridge** handle with the folded end of the filter angled downward, guide the filter platform into place until it rests upon the support ring.

Step 4 Slowly add just enough water to wet the filter and fully submerge.

Step 5 Add half of the ground coffee on top of the filter and platform. Next, add half of the remaining filtered water, pouring evenly to saturate all coffee grounds.

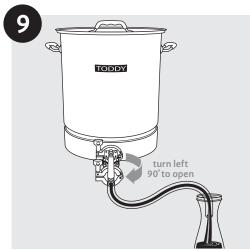

Step 6 Carefully stir with a mixing paddle, avoiding contact with the filter. Repeat step 5 to add the remaining coffee and filtered water. Tip: For best results, mix coffee grounds by pulling and plunging them from the edge of the brewer toward the center.

Step 7 Stir again after 30 minutes to release trapped gas and to ensure that all grounds are evenly saturated.

Step 8 Cover brewer with lid and allow to brew at room temperature for 8 to 24 hours, depending on preferred flavor profile.

Step 9 Once brewing is complete, place one end of the hose onto the hose barb and the other end into a clean storage vessel. Open valve to drain your cold brew coffee extract. Once draining is complete, refrigerate extract in air-tight containers for up to 2 weeks.
